

CANARY

HAZARDOUS ENVIRONMENTS MONITORING AND CONTROL

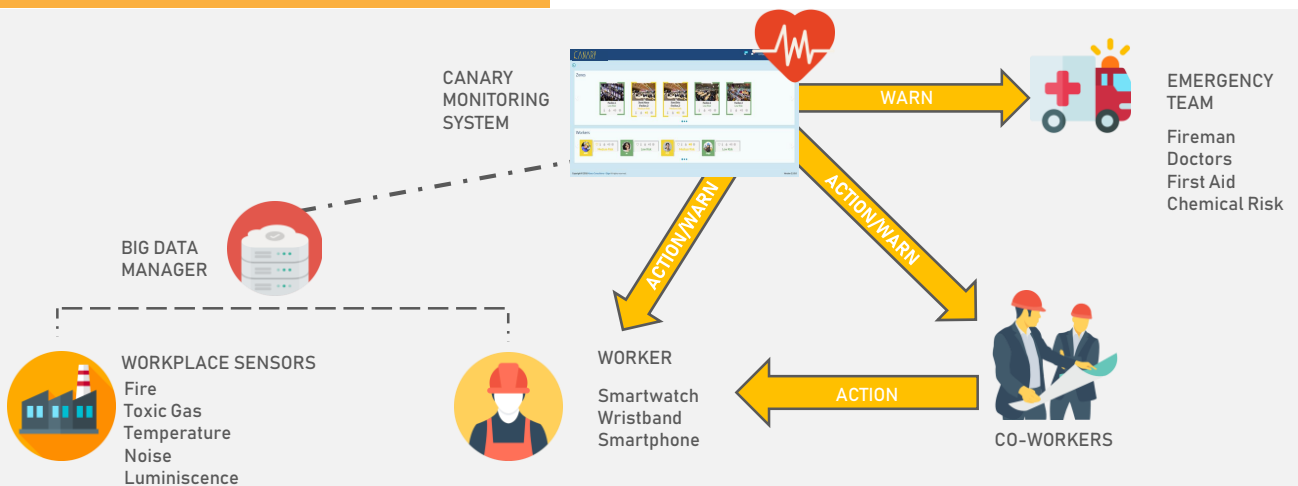

Abaco Canary is a Safety Monitoring and Control system for hazardous conditioned environments.

This solution aims to use consumer grade wearables and industrial sensors to create a holistic overview of what's happening in your company, allowing a real-time response to incidents.

Fiori and non-Fiori monitoring system

HOW CANARY WORKS

Managing risks/incidents in today's world has evolved from putting up danger signs, wearing hard hats/visibility jackets whilst relying on a panicked telephone description. In today's market, companies can have accurate, real-time, information based on developed risks and events. This new technology enables incidents to be met with an immediate and proper response, therefore avoiding consequences and threats for employees and assets, whilst upholding first tier regulatory compliance.

OVERVIEW

Real-time sensor and equipment overview

SMARTWATCH

Connected smartwatch for employee life signs monitoring

FIRST RESPONDERS

Deploy and properly equip first responder teams with incident appropriate gear and information

ALERTS

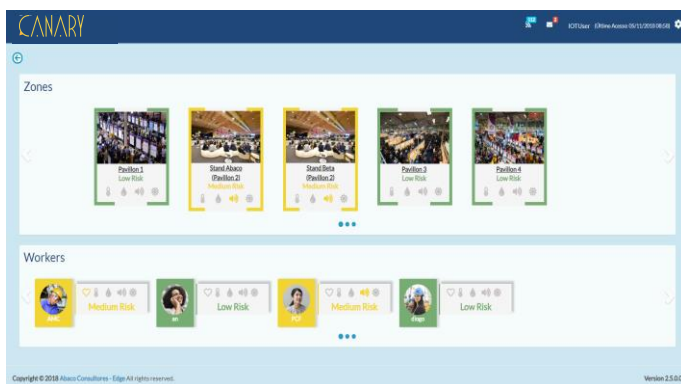

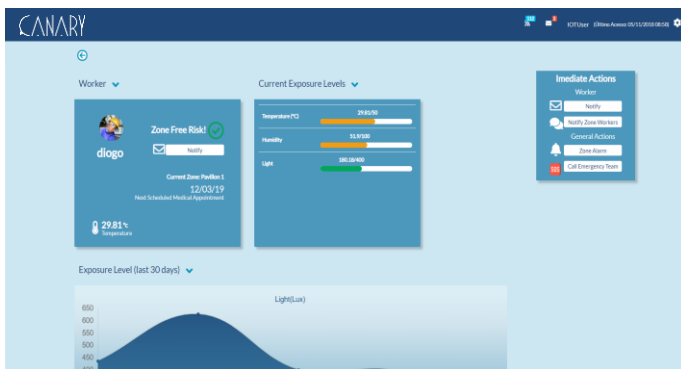

Alerts for safety officers and employee with context information

SHUTDOWNS

Generate automatic system shutdowns in case of incidents

KEY FEATURES

- Real-time reaction to events
- Employee passive monitoring to detect sudden health situations
- Real-time ERP and sensor data merge for in-depth evaluation of situations

Real-time 24/7 monitoring system
